SUMMARY

Backend-focused Software Engineer with experience building scalable microservice-based applications using Node.js, NestJS, TypeScript, MySQL, PostgreSQL, and Redis. Skilled in designing secure REST APIs, optimizing database performance, implementing authentication systems, and managing production deployments. Hands-on experience with AWS, CI/CD pipelines, automated testing, and resolving critical production incidents for fintech platforms serving 50K+ daily users.

CORE SKILLS

- **Backend Development:** Node.js, NestJS, Express.js, REST APIs, Microservices, Swagger, TypeORM
- **Frontend:** React.js, Next.js, Tailwind CSS
- **Databases:** PostgreSQL, MySQL, Redis, MongoDB, Database Design, Query Optimization
- **Programming Languages:** JavaScript, TypeScript, Python, Java, C++
- **Cloud & DevOps:** AWS (EC2, ECS, S3, Lambda, IAM, API Gateway), Docker, Git, GitHub, GitHub Actions, Jenkins, CI/CD
- **Authentication & Security:** JWT Authentication, Firebase Authentication
- **Testing:** Unit Testing, Integration Testing, Automation Testing
- **Monitoring & Tools:** Sentry, New Relic, Jira, Agile Development

EXPERIENCE

Software Development Engineer (SDE - I)

Zolarity Labs – Jaipur, RJ

Mar 2026 – Present

- Developed and maintained backend services across five microservices using NestJS, TypeScript, and MySQL.
- Designed and developed 20+ production-grade REST APIs for payment, investor, partner, reporting, and admin modules with authentication, validation, and Swagger documentation.
- Revamped the installment payment workflow by redesigning backend payment APIs to improve maintainability and business flexibility.
- Designed and implemented a dynamic role-based admin permission management system enabling runtime permission management.
- Optimized SQL queries and API responses by eliminating unnecessary data retrieval while introducing advanced filtering capabilities without impacting response time.
- Authored database migrations to create new tables, modify schemas, add new columns, and backfill production data safely.
- Implemented JWT- and Firebase Authentication-based security and resolved a critical authentication issue affecting users in China by introducing a backend reverse proxy.
- Managed production deployments through GitHub Actions, handled rollbacks, and resolved P0 production incidents while participating in on-call rotations.
- Built and optimized scheduled cron jobs, developed unit and integration tests, and delivered backend features for a fintech platform serving approximately 50K–60K daily users and processing 5K–7K daily transactions.

Software Engineering Intern (Backend & Test Automation)

Grip Invest Tech Pt. Ltd, Gurugram, HR

Jan 2025 – Dec 2025

- Developed an internal Asset Cloning Tool using Node.js and MySQL to automate production-to-QA data replication, significantly reducing manual environment setup effort.
- Automated approximately 80% of regression test cases, reducing annual manual testing effort by around 60% while improving release confidence.
- Designed and maintained backend automation utilities and cron-based processes to streamline engineering and QA workflows.

- Created a GitHub Actions workflow to automatically generate release notes from conventional commit messages, standardizing release documentation.
 - Built and maintained unit, integration, and automation test suites for backend services, collaborating closely with developers to validate APIs, database changes, and production releases.
 - Worked with Jenkins, GitHub Actions, and CI/CD pipelines to automate testing and improve deployment reliability.
-

PROJECTS

- **Asset Cloning Tool**

Technologies: Node.js, MySQL

- Developed an internal tool to replicate production assets into QA environments while maintaining data integrity.
- Automated data cloning workflows, significantly reducing manual QA environment setup time.
- Improved testing efficiency by enabling faster and more reliable test environment preparation.

- **Portfolio Website**

Technologies: Next.js, React.js, Tailwind CSS, Node.js

- Developed and deployed a responsive personal portfolio website showcasing projects and technical experience.
- Built backend APIs for contact management and integrated email notification functionality.
- Deployed the frontend on Vercel and backend services on Render with a custom domain.

- **GitHub Release Notes Automation**

Technologies: GitHub Actions, Git

- Developed a GitHub Actions workflow that automatically generated release notes from conventional commit messages.
 - Standardized release documentation while eliminating manual effort during deployments.
-

EDUCATION

Batchelor of Technology (B.Tech) – Computer Science and Engineering

Amity University Rajasthan, Jaipur

2021-2025

CGPA – 7.89/10
